

LITTLE MATHEMATICIANS

PLACE VALUE 11-20

NATALIE LYNN KINDERGARTEN

ABOUT THIS CURRICULUM

This curriculum is designed to give students a strong foundation in number sense, geometry, measurement and data, and beginning addition and subtraction. This curriculum is meant to build upon students' understanding and prior knowledge with each lesson.

You may find that there is more than you can fit into one day. That is okay! You can choose what will work best for your class.

No part of this resource may be reproduced electronically or physically beyond a single classroom's needs, shared without additional licenses, or placed on the internet for others to access without the prior written permission from the creator, Natalie Lynn. If you are a school district using this curriculum for more than one teacher, you may purchase additional licenses at a discounted price.

Lesson Ten – pages 68-91

Unit Two Assessment – pages 92-96

Place Value Math Centers – pages 97-142

FREQUENTLY ASKED QUESTIONS

Is this unit meant to be taught whole group or small group?

Either! I did write this unit with whole group instruction in mind, but these activities would also work well in small group guided math. Options for differentiation in small groups are included in each lesson. I call these units “guided math” because the teacher is guided the students through a gradual-release model.

Do I need to teach these lessons in order?

It is recommended, but not necessarily. Some of these lessons do build off of the previous lesson (for example, teaching counting strategies), so I would not suggest mixing those up. However, if you need to change the order of most lessons or mix in lessons from another unit to match the scope and sequence your district provides, you can easily do that!

Does this unit contain an assessment?

Yes, there is a unit assessment at the end. This assessment **ONLY** assesses skills taught in this unit. You will need to lead students through each part of this assessment. You can also easily use the Independent or Home activities as assessments. If you do not give homework, the home connections make great exit slips!

POSTERS AND MATH WALL

Vocabulary cards for a math word wall are included. These cards are currently half page size. You can print them multiple pages to a page if you prefer them smaller.

Options for Differentiation

Below Level - Scaffolding

Above Level - Enrichment

I can how many tens and ones using a ten frame.

K.CC.A.3, K.CC.B.4

Secret Number: Write the numbers 0-20 on the board or have a number line out. Think of a number and have students guess what the secret number is. Give clues to build vocabulary such as "No, it's not 16. It is *less* than 16. Remember, it is also *more* than 10. You can also give students turns thinking up the secret number and giving more/less clues.

Have a ten frame out (I like to make a large one out of tape or butcher paper and use plates as counters). Name a teen number and have students count out that many plates (for example, for 13, 10 would fill in the ten frame and then 3 would go below the ten frame). Remind students that the 1 in the teen number means that I have 1 group of ten. We don't have to count this out because we know a ten frame is always a group of ten. The second number tells us how many extra ones we will have. Use the sentence frame "__ tens and __ ones makes __." Write this sentence frame on the board and fill in for each number. Repeat with multiple teen numbers.

Students will work in pairs. They will spin a teen number and build it on the ten frames. They will fill in the number talk sentence or point to the spots in the sentence and say it orally.

Students will fill in the blanks to tell how many tens and ones.

Students will fill in the blanks to tell how many tens and ones are in each number.

Options for Differentiation

Scaffold by having students practice counting out sets of 10 counters. After they count out each set, have them place it on a ten frame and count it out. After, place 4 counters below one of the ten frames and ask how many they see (4). Say "We have ten in the ten frame and 4 below." Count them all together to see how many there are (14). Show them how you have a group of 10 and 4 extra ones. Repeat this with several numbers. If you want, use the slide together numbers to show how 10 and the ones go together. Optional: Have them identify the teen numbers on the page.

Extend the learning by have students build numbers up to 29 using two ten frames. Students will identify how many tens and how many ones.

SPIN AND BUILD TEN FRAMES

SPIN AND BUILD TEN FRAMES

Place Value 11-20

I can how many tens and ones using a ten frame.

K.CC.A.3, K.CC.B.4

Secret Number: Write the numbers 0-20 on the board or have a number line out. Think of a number and have students guess what the secret number is. Give clues to build vocabulary such as "No, it's not 16. It is *less* than 16. Remember, it is also *more* than 10. You can also give students turns thinking up the secret number and giving more/less clues.

Have a ten frame out again. This time, students will start with the teen number and then place or draw the counters on the ten frame and identify the tens and ones. Give students the number 14 and have someone fill in the ten frame to show the group of ten and 4 extra ones. Complete the number talk "14 is __ tens and __ ones." Fill in the sentence on the board or say it orally. Repeat several times with different teen numbers, helping students talk through their thinking throughout - how many groups of ten will you need? How many extra ones will you need? How do you know?

Students will work in pairs. They will spin a teen number and build it on the ten frames. They will fill in the number talk sentence or point to the spots in the sentence and say it orally.

Students will fill in the ten frames and tell how many tens and ones.

Students will fill in the ten frames and tell how many tens and ones.

Options for Differentiation

Scaffold by having students practice counting out sets of 10 counters. After they count out each set, have them place it on a ten frame and count it out. After, place 7 counters below one of the ten frames and ask how many they see (7). Say "We have ten in the ten frame and 7 below." Count them all together to see how many there are (17). Show them how you have a group of 10 and 7 extra ones. Repeat this with several numbers. If you want, use the slide together numbers to show how 10 and the ones go together. Optional: Have them draw the teen numbers on the page.

Extend the learning by have students build numbers up to 29 using two ten frames. Students will identify how many tens and how many ones.

SPIN AND BUILD TEN FRAMES

Place Value 11-20

I can how many tens and ones using a ten frame.

K.CC.A.3, K.CC.B.4

Missing Number: Write the numbers 0-20 on the board or have a number line out. Have students cover their eyes as you erase 1 or 2 numbers. Have them open them again and identify which number is missing as fast as they can. You can also give students a turn at erasing the number.

Repeat the same activity as yesterday, having students come up to add counters to the ten frame and then identifying the tens and ones. Then, have students work in pairs or individually with a ten frame and counters. You will tell students a place value (show me 1 ten and 6 ones) and have them fill in their ten frame to match. Then, together, you will identify the number and complete the sentence “__ is __ tens and __ ones.” Repeat several times. If students are working in partners, you can also have one partner choose the number and the other build and complete the sentence.

Students will work in pairs. They will spin a place value, build it on the ten frame, and then identify the number.

Students will fill in the ten frames and tell how many tens and ones.

Students will fill in the ten frames and tell how many tens and ones.

Options for Differentiation

Again, have students build numbers on the ten frames. Today, emphasize the tens and ones, have students use the sentence for each one “__ is __ tens and __ ones.” Continually talk through why there is one ten (because there is one full group of ten) and how they know what number it is. Optional: Have them draw the teen numbers on the page and write the tens and ones.

Have students spin and build a number and then identify what would be one more and one less.

SPIN A PLACE VALUE

Place Value 11-20

Name: _____

Fill in the ten frame to match the tens and ones. Then write the number.

_____ is

1 ten and 4 ones.

_____ is

1 ten and 8 ones.

_____ is

1 ten and 2 ones.

_____ is

1 ten and 5 ones.

_____ is

1 ten and 7 ones.

Name: _____

Fill in the ten frame to match the tens and ones. Then fill in the number.

_____ is
1 ten and 3 ones.

_____ is
1 ten and 6 ones.

We learned how to that teen numbers are made up of tens and ones. Say a ten and ones (1 ten and 4 ones) and have your child identify the number (14).

Name: _____

Fill in the ten frame to match the tens and ones. Then fill in the number.

_____ is
1 ten and 3 ones.

_____ is
1 ten and 6 ones.

We learned how to that teen numbers are made up of tens and ones. Say a ten and ones (1 ten and 4 ones) and have your child identify the number (14).

Draw counters to show each number.

18

___ tens and ___ ones

11

___ tens and ___ ones

13

___ tens and ___ ones

Draw counters to show each number.

18

___ tens and ___ ones

11

___ tens and ___ ones

15

___ tens and ___ ones

13

___ tens and ___ ones

I can identify how many tens and ones a teen number has.

K.CC.A.3, K.CC.B.4

What's My Number? Write teen numbers on sticky notes and place them on students' foreheads without them seeing the number (you will need pairs or groups of 3, so make multiple of each number). Students will walk around and try to find their matching partner, but they can't tell each other their numbers. They can only ask place value questions (How many ones does my number have?)

Give partners or individual students whiteboards. You will say a place value (1 ten and 5 ones) and students will write the number (15) and hold up their board as quickly as possible. Once they identify the number, have students help build that number on the ten frame. Repeat several times, emphasizing the group of ten and the extra ones.

Students will work in pairs. They will spin a place value, build it on the ten frame, and then identify the number.

Students will match the numbers to the place values.

Students will write the numbers to match the place values given.

Options for Differentiation

Again, have students build numbers on the ten frames. Today, emphasize the tens and ones, have students use the sentence for each one “__ is __ tens and __ ones.” Continually talk through why there is one ten (because there is one full group of ten) and how they know what number it is. Optional: Have them draw the teen numbers on the page and write the tens and ones.

Have students spin and build a number and then identify what would be one more and one less.

I can make teen numbers using rods and cubes.

K.CC.A.3, K.CC.B.4

Beach Ball Toss: You will need a ball for this activity. Write teen numbers all over the ball (if you don't want to do this, just toss the ball and say a number when students catch it). You will toss the ball to a student and they will identify the teen numbers and how many tens and ones that number has.

Show students a full ten frame and ask them how many it shows (10). Then, show students a rod and ask them how many it shows (accept all answers). Show them a cube and ask them how many it shows (1). Now, show them how a rod is made up of 10 cubes and count them. Explain that the ten frame and the rod are the same; they are both a way to show a group of ten. Give each student 2 rods and 9 cubes and tell them a teen number to build. If they try to use just the cubes, they will not have enough. Once students try it themselves, remind them that a rod is a group of ten. Just like when we use our ten frames, they will need a group of ten and some extra ones. Repeat and have students practice building several numbers.

Students will work in pairs. They will spin a teen numbers and build it with rods and cubes (Use the mat or just the spinners).

Students will match the numbers to the base ten blocks.

Students will write the teen numbers next to the base ten blocks..

Options for Differentiation

For students who you know will need support, I suggest doing the full lesson in a small group. Either way, spend time showing these students teen numbers in the form of base ten blocks and counting out what number they represent together. Then, have them build the same number using the base ten blocks and repeat several times.

After you have practiced building teen numbers, show students two rods. Ask them what number this would show. Two rods is two groups of ten. We know that is 20. Repeat with 30. Put out sets of rods and have students help you count by tens.

We learned about base ten blocks. A rod represents a group of ten and a cube represents one. What numbers can you make with the rods and cubes below?

SPIN AND BUILD TEN FRAMES

Place Value 11-20

I can make teen numbers using rods and cubes.

K.CC.A.3, K.CC.B.4

Beach Ball Toss: You will need a ball for this activity. Write teen numbers all over the ball (if you don't want to do this, just toss the ball and say a number when students catch it). You will toss the ball to a student and they will identify the teen numbers and how many tens and ones that number has.

Review with students how much the rod and the cube are worth and how they know. Give students a teen number and have them come up to build it with base ten blocks. I have included printable blocks you can use. Optional: add magnets to the back to build on the board. Repeat with several numbers. If you are able, have students build the numbers with their own base ten blocks before a student comes up to build that number with the large blocks. If not, give students time to build numbers with their own blocks or in partners at the end.

Students will work in pairs. They will turn all of the number and base ten cards face down. They will take turns flipping over 2 cards and trying to find a match.

Students will match the numbers to the base ten blocks.

Students will write the teen numbers next to the base ten blocks..

Options for Differentiation

For students who you know will need support, I suggest doing the full lesson in a small group. Either way, spend time showing these students teen numbers in the form of base ten blocks and counting out what number they represent together. Then, have them build the same number using the base ten blocks and repeat several times.

Begin building numbers with multiple tens. Emphasize how many tens and ones each number has and how many rods and cubes we will need. Practice counting the groups of ten by tens.

Count the base ten blocks and write the number.

We learned about base ten blocks. Practice making numbers with the base ten blocks sent home yesterday.

I can make 20 using base ten blocks.

K.CC.A.3, K.CC.B.4

Beach Ball Toss: You will need a ball for this activity. Write teen numbers all over the ball (if you don't want to do this, just toss the ball and say a number when students catch it). You will toss the ball to a student and they will identify the teen numbers and how many tens and ones that number has.

Review with students how much the rod and the cube are worth and how they know. Put out 2 rods and ask students if they know what number that shows. Talk through it (I see 2 rods which means 2 groups of ten. What number do we know is 2 groups of 10?). Show students the number 20 and point out that it has a 2 in the tens place, which means that it has 2 groups of 10. Have students use their own blocks to build 20. Give them other teen numbers to build as well, coming back to 20 often and reviewing why they would use 2 rods and no cubes.

Students will spin and color 12 or 20 and their representations.

Students will write numbers next to the base ten blocks.

Students will write the teen numbers next to the base ten blocks..

Options for Differentiation

Before playing spin and color, have students build both numbers on double ten frames and using base ten blocks so that they have a reference. If you want more practice, laminate the spin and color page and use counters instead so that it can be reused.

Begin building numbers up to 99. Emphasize how many tens and ones each number has and how many rods and cubes we will need. Practice counting the groups of ten by tens.

10 and 9

I CAN IDENTIFY NUMBERS

Count each set and clip the matching number.

The image shows a hands-on math activity. An orange bin is filled with colorful clothespins. Several cards from 'Little Mathematicians Kindergarten' are laid out on a wooden surface. Each card features a visual representation of a number and a list of options to be matched with a clothespin.

- Card 1:** Shows '1 ten' and '2 ones'. A blue clothespin is clipped to the number 12.
- Card 2:** Shows a vertical bar of 10 blue blocks and 2 small blue cubes. A purple clothespin is clipped to the number 12.
- Card 3:** Shows a 2x5 grid of 10 black dots and 5 more black dots below it. A pink clothespin is clipped to the number 15.

Other cards visible in the background show the number 17 with the word 'one' and the number 12.

I CAN DECOMPOSE NUMBERS

Roll a die. Color or dab the matching circle.

Two worksheets for decomposing numbers are shown. The top worksheet has a 'Name:' field and a die icon. It features a table with die faces (1-6) and corresponding numbers (11-16). Below the table are circles containing addition problems for decomposition.

Die Face	Number
1	11
2	12
3	13
4	14
5	15
6	16

Decomposition circles on the top worksheet:

- $10+1$
- $10+2$
- $10+6$
- $10+3$
- $10+4$
- $10+1$
- $10+5$
- $10+3$
- $10+4$
- $10+5$
- $10+2$
- $10+4$
- $10+6$
- $10+5$

The bottom worksheet shows a similar layout with circles containing '1 ten' and 'x ones' (e.g., 4 ones, 8 ones, 7 ones, 6 ones, 5 ones, 7 ones, 9 ones).
